Drilling Mud Tank and Pit Cleaning Going Automated

October 17, 2007

Morgan City, LA – Production Management Industries, LLC (PMI), a Superior Energy Services company, announced that it has entered into a multi-year Alliance Agreement with Innovative Cleaning Solutions GoM LLC (ICS) to provide automated tank cleaning in the removal of liquid drilling muds from marine supply vessels and drilling rig systems in the Gulf Coast Region and all waters of the Gulf of Mexico.

PMI has provided conventional cleaning of these tanks to its customers since its inception in 1997. However, conventional cleaning is a very labor intensive task and most times requires numerous hours of confined space entry to safely remove wastes and provide clean tanks ready to accept new product.

This new automated cleaning process (patent pending) eliminates over 75% of the entry time required of its employees, automates and simplifies the cleaning process, and significantly reduces another waste stream (wash water) generated during conventional cleaning.

Danny Michael, PMI Vice President, states “Our Alliance with ICS to provide this innovative technology to the industry truly sets us apart from our competition. The impact on our combined business is remarkable. Our customers will realize substantial savings in waste disposal & product recovery as well as enhanced utilization of their marine supply vessels servicing their drilling programs.” He adds, “Most importantly, this process will improve the quality of life for our employees by reducing their exposure to confined space hazards and automating most of the cleaning process.”

David Ball, ICS President, states “I’m excited that ICS and PMI are teaming up to modernize tank cleaning. The incorporation of our new state-of-the-art technology – automated cleaning and environmentally responsible chemicals – coupled with PMI’s vast resources will squarely place the oilfield cleaning industry in the 21st century. We are continuously designing enhancements to our equipment that will further optimize the process.”

ICS is a privately owned company which engages in the design, manufacture, and implementation of specialized equipment and chemical systems to serve the particular cleaning needs that are unique to the oil and gas industry. The ICS concept is designed to provide a safer working environment that affords cost savings to customers through a reduction in actual cleaning time coupled with a closed loop recycling system that minimizes waste generation.

PMI is a wholly owned subsidiary of Superior Energy Services, Inc. which is publicly traded on the New York Stock Exchange as **SPN**. Superior is ranked No. 54 on **FORTUNE** magazine’s Top 100 Fastest-Growing Companies in its September 17, 2007 issue. PMI’s Environmental Services Group – headquartered in Morgan City, LA with branches in Fourchon, Venice, and Harvey – offers dockside boat & barge tank and portable container cleaning; rig systems cleaning; NORM licensed for conventional and in-service cleaning of oil & gas production systems; and hazardous/non-hazardous waste assessment, sampling, cleanup, and closure of facilities, pits, marsh, and wetlands areas.

If you are interested in putting this new technology to work for you, contact Jamie Holt (PMI General Manager – Dockside and Rig Systems Cleaning Services) or Jay Esteve (PMI Sales Manager) via e-mail at jamie.holt@pmi.net and jay.esteve@superiorenergy.com or phone at 888-229-3837. Case studies and presentations are available upon request.
